US-VSII-9974

Sequence 4, Application US/08931999

Patent No. 6043219

GENERAL INFORMATION:
APPLICANT: Crupper, Scott S.
TITLE OF INVENTION:
APPLICANT: Crupper, Scott S.
TITLE OF INVENTION:
Broad Spectrum Chemotherapeutic Peptide
NUMBER OF SEQUENCES:
ADDRESSEE: Hovey, Williams, Timmons & Collins
STREET: 2405 Grand Boulevard, Suite 400
CITY: Kanasa City
STATE: Missouri
COUNTRY: U.S.A.
ZIP: 64108

Sequence 725, Application US/09976594

Patent No. 6673549

Patent No. 6673549

GENERAL INFORMATION:
APPLICANT: Furness, Michael
APPLICANT: Buchbinder, Jenny
TITLE OF INVENTION: GENES EXPRESSED IN C3A LIVER CELL CULTURES TREATED WITH STEROIDS
TILE REFREENCE: PA-0041 US
CURRENT APPLICATION NUMBER: US/09/976,594

CURRENT FILING DATE: 2000-10-12
PRIOR APPLICATION NUMBER: 60/240,409
PRIOR APPLICATION NUMBER: 60/240,409
NUMBER OF SEQ ID NOS: 1143
SOFTWARE: PERL PROGram
SEQ ID NO 725
LENGTH: 8146
TYPE: DNA

control also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody complete of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or ameliocathing a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention methods for the identification of compounds that modulate the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention carrier and/or monoclonal antibodies for the cDNA sequences of the invention of contig sequences corresponding to the cDNA sequences of the invention are expression or activity, and the polypeptides encoded by the contigs (ADC33262) and the polypeptides encoded by the contigs (ADC3334). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, burns, diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases. Alzheimer's conner. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, cand as food supplements. The present sequence represents a specifically of the patent did not form part of the printed specification, but was contained in electronic format directly from WIPO at the patent did not form part of the printed sequence of the printed in electronic for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     365

The invention relates to isolated mucleic acid (ABN81319-ABN81324),

corresponding to genes differentially expressed in mast cells following

activation or in pairents with allergic hypersensitivity disease, (I)

that encodes proteins (ABB77559-ABN87575) (II) or a protein fragment of

(II) if at least 6 amino acids. (II) is useful for identifying binding

partners. (I) or (II) is useful for diagnosing or treating a disease

partners. (I) or (II) is useful for diagnosing or treating binding

partners. (I) or (II) is useful for diagnosing or treating binding

cuticaria or atopic dermatitis or mastocytosis) in a subject which

involves determining the level of expression of (I) or (II). A computer

system, comprising a database containing information identifying the

expression level in a tissue or at least one mast cell of (I), is useful

for presenting information to identify the relative expression level of

(II) is used as a marker to detect, diagnose or identifying

response in a patient. The protein can also serve as a target that

modulate gene expression of activity and as an antigen to raise

collistic or antagonists. The agonists or antagonists are useful for

modulating biological activity and function of (II) and thus are useful

condulating disease conditions such as allergic hypersensitivity,

seasonal rhinitis, asthma, urticaria, atopic dermatitis or mastocytosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

of functional SPTM. The SPTM DNA sequences are useful for somatic or germline gene therapy to correct a genetic deficiency (e.g. severe combined immunodeficiency). The SPTM DNA sequences are also useful in providing protection against intracellular parasites (e.g. fungal parasites and protozoan parasites). The SPTM DNA and protein sequences are also useful for diagnosing cell paralites (e.g. fungal mamune disorders (e.g. AIDS), neurological disorders (e.g. Parkinson's disease), motor neuron disorders, demyelinating diseases (e.g. Parkinson's disease), motor neuron disorders, prion diseases, cerebral palsy, neuroskeletal disorders, peripheral nervous system disorders, unltiple sclerosis), meningitis, abscesses, prion diseases, cerebral palsy, neuroskeletal disorders, peripheral nervous system disorders, and mental disorders (e.g. Tourette's syndrome). CDNA sequences ABL99746 - ABL99929 represent human secretory polynualectides of the invention

The invention relates to human polynucleotides and the polypeptides they encode. The polynucleotides and polypeptides are useful in diagnostics, encode. The polynucleotides and polypeptides are useful in diagnostics, forensics, gene mapping, medical imaging, identification of mutations and producing many other types of data and products dependent on DNA and amino acid sequences. They are also useful for preventing, treating or amino acid sequences. They are also useful for preventing, treating or amino acid sequences. They are also useful for preventing, treating or amino acid sequences. They are also useful for preventing, treating or amino acid sequences, neurodegenerative disorders, osteoporosis, osteoarthritis, bone degenerative disorders, periodontal disease, liver fibrosis, infections (e.g. viral, fungal or bacterial) or autoimmune diseases (e.g. diabetes, acopic dermatitis). Sequences ABX04986-ABX05511 represent human polymucleotides of the cinvention. Note: The sequence data for this patent is not represented in the Brinted specification but is based on sequence information supplied by the European Patent Office
                                                                                                                                                                                                                               treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders, lymphoid cell disorders, bone degenerative disorders, and infections.
                                                                                                                                                                                                              New isolated polypeptides and polynucleotides, useful for preventing,

Tumour suppressor gene derived chemically modified sequence #50.

```
The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with being blailphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and complementary to (58). The nucleic acid may be a peptide nucleic acid complementary to (58). The nucleic acid may be a peptide nucleic acid coligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleic playmorphisms and also to be used in an array for analysing diseases associated with CpG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or active probes can also be used in a method for ascertaining genetic and/or copression to pacific diseases, by analysing diseases or the predisposition to specific diseases, by analysing cycosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters in the disposis events which are disadvantageous to parients. The present sequence is one of the 533 genomics sequence is one of the 533 genomics sequence of the corresponding odd numbered sequence is one of the 233 genomics sequence of the corresponding odd numbered sequence (e.g. ID 2 and IDI. ID 536 and ID. Corresponding odd numbered sequence (e.g. ID 2 and IDI. ID 536 and ID. Corresponding odd numbered sequence (e.g. ID 2 and IDI. ID 536 and ID. Corresponding odd numbered sequence (e.g. ID 2 and IDI. ID 536 and ID. Corresponding odd numbered sequence (e.g. ID 2 and IDI. ID 536 and ID. Corresponding odd numbered sequence (e.g. ID 2 and IDI.                                                                                                                                                             g
                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretraated DNA (CP DNA) e.g. with bissippite, of genes associated with tumour suppression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences (Ss) and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an array for malysing diseases associated with CpG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or chispenetic parameters for the diagnosis and/or therapy of existing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters may be compared to another set of patients. The present sequence is one of the 533 genomic sequences deriagnosis and/or prognosis events which are diagnosis and oncogenes. Note: The sequence compared to the printed sequence of the will be patient did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fragments of chemically modified genes associated with tumor suppressor genes and oncogenes, useful in designing primers and probes for analyzing diseases associated with cytosine methylation state e.g. cancer.
                                                                                                                                                                              Human; tumour suppressor gene; oncogene; antitumour; cytostatic; cancer; tumour; CpG dinucleotide; single-nucleotide polymorphism; SNP; cytosine methylation; ds.

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzhaimer's disease, AnDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

The invention relates to a nucleic acid comprising a sequence of at least 18 bases of a segment of chemically pretreated DNA of genes associated with cell signalling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is to provide the chemically modified DNA of genes associated with cell signalling, as well as oligonuclectides and/or PNA-oligomers for detecting cytosine methylations, as well as a method which is particularly suitable for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as solid tumours and cancer. The sequences given in records ABL70111-ABL70626 represent chemically pre-treated genemic DNA's of genes associated with cell signalling. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the
                                                                                                                                                              18226 rcraaarcaaaacaaacriraccaacrararcaararrarrarcaccacracrarcaa 18167

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the invention

recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The identifying a compound which binds to a polypeptide of the invention. The identifying a medical condition; kits comprising polymotecride probes and/or monoclonal antibodies for carrying out the methods of the expression or activity of the polymotecride and/or polypeptide of the invention arctivity of the polymotecride and/or polypeptide; and 767 contig sequences corresponding to the compounds that modulate the expression or activity of the polymotecride and/or polypeptide; and 767 contig sequences corresponding to the contegs (ADC3262) and the polymotecride and/or polypeptides of the invention are useful in diagnostics, drug screening, forensics gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are classification diseases such as Parkinson's diseases and other treating diseases such as Parkinson's diseases or cancer. The nucleic acids may also be used as hybridisation probes or cancer. The nucleic acids may also be used as hybridisation probes or cancer. The nucleic acids may also be used as hybridisation probes or cancer. The nucleic acids may also be used as hybridisation as specifically, and as food supplements. The presents sequence represents a specifically

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1167
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1227
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and as food supplements. The present sequence represents a specifically claimed human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the print of the print from FIPO at the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          181

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to 9/1 movel number cuts sequences (ADC310890-ADC31860). The invention also relates to outleic acid sequences over 99% identical with invention also relates to nucleic acid sequences over 99% identical with the nucleic acid deditionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; a method of detecting of identifying a compound which binds to a polypeptide of the invention. The invention and methods of invention further discloses methods of peventially treating or amplicating a medical condition; kits comprising polymuclectide probes and/or monoclonal antibodies for carrying out the methods of the invention are invention; methods for the identification of compounds that modulate the expression or activity of the polymuclectide and/or polypeptide; and 767 contig sequences corresponding to the compounds that modulate the expression or activity of the polymuclectide and/or polypeptide; and 767 contig sequences corresponding to the compounds that modulate the expression or activity of the polymuclectide and/or polypeptide; and 767 contig sequences corresponding to the compounds that modulate the capture of acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the caseful in diagnostics, drug screening, forensics, gene mapping, in the case and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's discorders, wounds, burns, ulcers, cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and an experiment of man appearance of the invention. Note: The sequence data for the printed specification. The patent of the printed specification, the printed in 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a new isolated polypeptide (NOVX). The NOVX polypeptide, nucleic acid and antibody are useful as therapeutics, particularly in the manufacture of a medicament for treating a syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cytoplasmic, nuclear membrane bound or secreted polypeptides (NOVX) and polynucleotides, useful in gene therapy, e.g. for treating or preventing obesity, multiple sclerosis, allergy, cancers, hemophilia, stroke or infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gorman L, Li L, Anderson DW, Zhong M;

cc associated with a human disease, which includes a pathology associated consisted with a human disease, which includes a pathology associated the with NOVX polypeptide. The DNA encoding the protein is useful in generatherapy for treating the disease or condition. In particular, the NOVX cc polypeptide or polynuclectide is useful for treating endocrine/ cc metabolism-related diseases (e.g. obseity or diabetes), central nervous system disorders (e.g. Alzheimer's disease, Parkinson's disease, cc and inflammatory disease, rhewmaton's disease, useful arthritis or asthmatory bowel disease, rhewmatorid arthritis or stecarthritis), cancers, or melanoma), liver disease, ovarian, co prostate or brain cancers, or melanoma), liver diseases (e.g. liver cirrhosis), lung diseases (emphysema or obstructive pulmonary disease), haemophilia, stroke, or infections (e.g. viral, bacterial or parasitic). These are also useful in developing powerful assay system for functional analysis of various human disorders, as well as in diagnostic capplications, and for monitoring the effects of drugs during clinical trials. This sequence encodes a novel human NOV protein

GENERAL INFORMATION:

APPLICANT: LYAID DOUGETEE-Stamm et al

APPLICANT: LYAID DOUGETEE ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS

TITLE OF INVENTION: NUCLECT ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICANCE: GTC-007

CURRENT APPLICATION NUMBER: US 60/064,964

PRIOR FILING DATE: 1997-11-08

PRIOR APPLICATION NUMBER: US 60/055,779

PRIOR FILING DATE: 1997-08-14

NUMBER OF SEQ ID NOS: 5674

SEQ ID NO 1161

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The WGS reads were placed uniquely on the MGSCv3 C57EL/GJ assembly and SNP detection was carried out by SSAHA-SNP. 225,000 reads were annotated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   101 CTACATTTGAAAGAAAACTTCAAGATCAAGATAAGAAAAGCCAAGAAGTTTCATCCACTT 160

Gossypium hirsutum

Eukaryota, Viridiplantee, Streptophyta; Embryophyta; Tracheophyta;

Eukaryota; Viridiplantee, Streptophyta; Embryophyta; Tracheophyta;

Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;

rosids; eurosids II; Malvales; Malvaceae; Malvoideae; Gossypium.

(E-mail: serie Gaston Cremieux, CP 5706, 91057 EVRX cedex, FRANCE. (E-mail: This STS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosacharomyces rouxxii, Saccharomyces Ruyveri, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces thermotolerans, Rluyveromyces angusta, Debaryomyces hansenti var. marxianus pichhia candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

JS3 bp DNA linear STS 10-JAN-2001 T7 end of clone AROAA022A02 of library AROAA from strain CBS 732 of AL395173
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Anote—Whotor: Milynpin with added BstXI site; V-type: Phage; Genomic DNA from a single adult Zebrafish of AB strain was digested with Alul, Caceli, Haelli, NlaVI, or Rsai. Fragments in the range of 250-500 bp were gel purified and a BstXI linker was added. The fragments were cloned into a modified Milynpin vector and transformed close Coli Mislapha. Microsatelllite sequences were screened with labeled d(A)15 and d(GI)15 oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    266 ATGAGAACATTGACTCCCTCACAAGGAAAGTGAGACAGTTTAGAGAAAGGTCAGAGACAG 325

This STS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces servazii, Zygoaaccharomyces rouxii, Saccharomyces ervazzii, Zygoaaccharomyces rouxii, Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hassenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
